

Report

Summary for the graph: The graph shows the most actively modified modules in the last six months by looking into the most commit and churn. In both cases, the list of the submodule is the same, while the order is different.

While tests and db modules are the top 2 in both cases, objects module is 3rd in commit but 7th in churn. Objects have low code change per commit (average code change of 11.91 change per commit) compared to the scheduler module (average code change of 110.7 change per commit).
